Day 1 : Overview of Peripherals Theory

Task 1 : Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case (for example: 'Inkjet printer – printing college assignments').

No.	Device	Type	Description and Real-Life Use
1	Printer	Inkjet Printer	Sprays tiny drops of ink onto paper. Used for printing college assignments, colour documents, and photos.
2	Printer	Laser Printer	Uses laser technology and toner powder to print quickly. Commonly used in offices for printing many documents.
3	Printer	Dot Matrix Printer	Uses small pins to strike an ink ribbon against paper. Used in shops and businesses for bills and multi-copy receipts.
4	Scanner	Flatbed Scanner	Scans documents or photos placed on a flat glass surface. Used for scanning certificates, photographs, and important documents.
5	Scanner	Sheet-fed Scanner	Automatically feeds paper through the scanner. Used in offices to scan multiple pages quickly.
6	Webcam	Built-in Webcam	A camera integrated into a laptop or monitor. Used for online classes, video calls, and virtual interviews.
7	Webcam	External USB Webcam	A separate camera connected through a USB port. Used for desktop video meetings, online teaching, and live streaming.

Task 2 : Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used (USB, Wi-Fi, or Bluetooth).

1. USB Connection : Connect the printer to the laptop using a compatible USB cable. This provides a stable, direct connection and usually requires installing the printer driver.

2. Wi-Fi Connection : Connect both the laptop and the wireless printer to the same Wi-Fi network. This allows printing without a physical cable.

3. Bluetooth Connection : If both devices support Bluetooth printing, enable Bluetooth and pair them through the device settings. This method is suitable for short-range wireless connections.

4. Printer Driver Installation : Install the correct driver from the printer manufacturer's official website so the laptop can communicate properly with the printer.

Task 3 : List three different connection interfaces (such as USB, Wi-Fi, Bluetooth) used by peripherals like printers, scanners, and webcams, and for each, name one advantage and one disadvantage.

No.	Connection Interface	Advantage	Disadvantage
1	USB (Wired)	USB provides fast data transfer and a stable connection. It is commonly used for printers, scanners, and webcams.	It requires a physical cable and a compatible USB port.
2	Wi-Fi (Wireless)	Wi-Fi allows compatible printers and scanners to connect without cables. Multiple devices can use the same network.	It requires Wi-Fi setup and may experience connection problems if the signal is weak.
3	Bluetooth (Wireless)	Bluetooth connects compatible devices wirelessly and is convenient for short-distance use.	It has a limited range and may offer slower data transfer than USB.

Task 4 : Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.

Connecting a Printer to My Laptop Using Bluetooth

Device: Bluetooth-enabled printer

Computer: ASUS TUF Gaming F15 laptop

Connection Method: Bluetooth (Wireless)

Step-by-Step Instructions

1. Turn On the Printer: Connect the printer to a power source and switch it on. Make sure it supports Bluetooth printing.

2. Enable Bluetooth on the Printer: Open the printer's settings and enable Bluetooth pairing mode so the laptop can discover it.

3. Enable Bluetooth on the Laptop: Open Settings → Bluetooth & devices on my ASUS TUF Gaming F15 and turn on Bluetooth.

4. Pair the Devices: Select Add device → Bluetooth and choose the printer from the available devices. Follow any pairing instructions shown on the screen.

5. Install the Printer Driver: If required, download and install the correct driver from the printer manufacturer's official website.

6. Add the Printer: Open Settings → Bluetooth & devices → Printers & scanners, select Add device, and follow the instructions to set up the printer.

7. Print a Test Page: Open a document, select Print, choose the connected printer, and print a test page to check that it works.
